Keypad Immobilisation - Powered by VT202

Keypad Immobilisation

The keypad immobiliser provides a robust and secure driver/operator authentication system to prevent theft, unauthorised usage whilst also only allowing qualified personnel operational access.

Locking down the asset until an authorised code is typed into the keypad. This works alongside the VT tracking solution offering the ultimate barrier in theft prevention. Keypad immobilisation is also compatible with the award-winning Asset+ tracking solution providing triple layer protection the first company to offer this and exclusive to AMI Group, ensuring you – the user – a full range of benefits including asset management, after theft recovery and theft prevention.

The ultimate in theft prevention

The AMI Keypad secure is a fast and simple way to enable multi operator authentication and the highest level of machine security, the Keypad links seamlessly into AMI's VT GPS tracking hardware to enable 4 to 6 digit pin authentication and machine access.

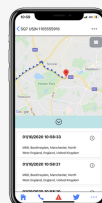

Simply enter a valid code and the VT202 will un immobilise your asset.

Features

- Up to 4,000 user code memory built in, easily created and deleted by the administrator
- The last user/operator identified in case of incidents
- Operating voltage 6v-30v
